# Lizards of Komoc

Gleam of gold on the hide of a newly hatched Komodo dims with maturity. "The 21½-inch baby weighed next to nothing," said the author. It coiled inside a shell the size of a goose egg.

Realm of the dragons: Green tone shows the giant lizards' tiny kingdom.

Their agility belying their bulk, two Komodos advance on the hunt. Like crocodiles and alligators, they never slither across dry land but always rise up on their legs to move. Wrinkled

folds of skin on their flanks will stretch smooth after a full meal. When angered, the reptiles puff out their necks. Speckles of bony calcium make the scaly hide valueless for handbags and shoes.

876). About a thousand of the lizards—largest in the world—survive on four tropical islands: Komodo, Rintja, Padar, and the southwestern corner of Flores. Hoping to save *Varanus komodoensis* from extinction, the Indonesian Government has proclaimed part of Rintja a dragon sanctuary and has restricted export of the giants.
